

SteelPhalt, a Harsco Environmental Company, Launched Carbon-Negative Asphalt Product

April 25, 2022

SteelPhalt has introduced the world's first carbon-negative steel slag aggregate-based asphalt using lignin binder product made from trees.

CAMP HILL, Pa., April 25, 2022 (GLOBE NEWSWIRE) -- Harsco Corporation (NYSE: HSC), a global market leader providing environmental solutions, announced SteelPhalt, a part of its Harsco Environmental division has launched a carbon-negative asphalt product.

SteelPhalt's asphalt products use 95% recycled steel slag. Prior SteelPhalt asphalt products use bitumen to bind the asphalt. Bitumen is an oil-based binder product with a significant carbon footprint.

SteelPhalt's new asphalt product, called SteelSurf ECO+, uses kraft lignin-based Lineo®, a renewable bio-based substance, supplied by GautamZenUK in collaboration with Stora Enso, as an alternative to bitumen dramatically reducing the product's carbon footprint.

"In our journey to become the world's most sustainable asphalt supplier, this is a huge step forward," said Julian Smith, SteelPhalt Strategic Growth Director. "This product is an example of what our team's collective passion for innovation and sustainability can deliver, while making the world a greener place."

About Harsco Environmental

Harsco's Environmental division is the largest and most comprehensive provider of onsite material processing and environmental services to the global metals industry, with operations at over 130 customer sites across more than 32 countries. The division is a technology partner to cleaner, more efficient metal production, providing customers with economically and environmentally viable solutions for the treatment and reuse of production by-products.
